

3 WAY SCREENER

This self-contained plant is complete with a receiving hopper, double-deck screen, Kubota three-cylinder diesel engine and three stock-piling conveyors, all mounted on a track chassis with remote control. It is designed for customers who need three screened products and is ideal for landscaping, golf courses, crushed rock, hard core and beach cleaning.

The screened material can be separated exactly where it is needed on site. Oversize and undersize contamination can be removed to create usable finished products from waste. It can be fed by excavator or directly from a crusher conveyor.

The compact dimensions and low weight mean it can be easily transported and the conveyors fold hydraulically so the plant can be set up in a minute.

STANDARD FEATURES

Feed hopper
Choice of screen meshes
Umbilical remote control
18.5Kw water cooled Kubota diesel engine

DIMENSIONS

	Operating	Travel
Length	5,960mm	4,360mm
